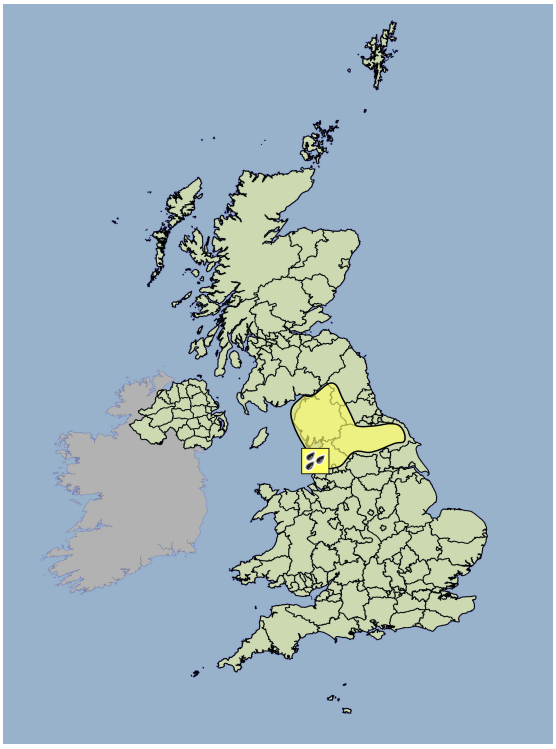
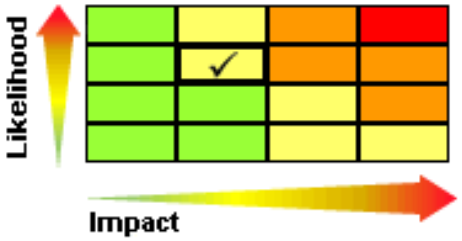
National Severe Weather Warning Service





Chief Forecasters Assessment
A low pressure system is expected to run into the UK from the southwest on Saturday, becoming slow-moving over the north of the UK on Sunday. This will push further areas of rain, and perhaps some hill snow, northwards across parts of northern England on Saturday evening before the precipitation becomes more showery on Sunday. Rainfall totals later today and overnight into Sunday may be 20 to 30 mm in places, sufficient for some "low" impacts given current saturated conditions.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **16:00 on Sat, 09th Jan 2016** until **09:00 on Sun, 10th Jan 2016**

An area of rain is expected to move northwards across northern England on Saturday night. This will clear northwards quickly on Sunday morning, although some showers will persist, especially in the west.

Whilst rainfall accumulations are not unusually large, with the ground remaining saturated please be aware of further localised flooding and disruption to travel.

This is an update, to pull the eastern edge of the warning back into the higher ground areas of the west of Northumberland and County Durham, but also to bring the end time forward, since rainfall totals from the showers through Sunday daytime now look much lower than they did.
